<sup>1</sup> Food and drink is not allowed in the City Council Chambers

## Glenarm GT5 Repower Project Meet & Greet

### January 8, 2014

An important part of the success of the Glenarm GT5 Repower project are our mutual efforts to reach out, engage, and utilize local Pasadena residents, contractors, and suppliers. To that end, as part of the Pre-Bid meeting, the City has arranged a "Meet and Greet" session for the BOP Contractor Bidders to meet with local Pasadena contractors. Attendance and participation in the "Meet and Greet" is mandatory for the Bidders.

Our goal is that the Bidders can engage in sincere conversation with local contractors to exchange contact information, discuss the Bidder's needs, understand the capabilities that are available within Pasadena, and discuss possible opportunities. When the bids are submitted, it is our goal that 15% (as discussed in the Specification) of the subcontracted work is subcontracted to local firms. The City and related entities will also be represented to help explain the project to the local contractors and resources that are available to assist them.

Recognizing the Holidays and the time between the release of the Specification and the Pre-Bid, we are also arranging a second "Meet and Greet" on January 22<sup>nd</sup> after everyone has had a chance to better understand the project. Attendance and participation in the second "Meet and Greet" is also mandatory for the Bidders.

Local contracting opportunities may include but are not limited to:

- Catering for meetings and events
- Office trailer rentals
- Equipment/Tool Rentals
- Environmental and Engineering Services
- Testing Services
- Temp office staffing

In addition to local contractors, there are also other opportunities to purchase within Pasadena such as:

- Furniture for the Maintenance Building and Control Room
- Office supplies
- Hardware
- Tools

The above is in addition to the PLA goal of 25% local union hiring such as:

- Pipefitters
- Boilermakers
- Ironworkers
- Electricians
- As well as other classifications
- Carpenters
- Laborers
- Drywall Installers
- Equipment Operators

**ALL BIDDER QUESTIONS OF PWP MUST BE SUBMITTED ON THE INDEX CARDS TO BE PROVIDED**

## Glenarm GT5 Repower Project Pre-Bid Meeting Response

Maintenance And Repair Services) <b>95826-Construction Management Services</b> | gkworks was established in 1991 to provide professional services with a specific emphasis on building types that serve the needs of our communities. We provide a full range of architectural and construction services for housing, civic, hospitality, commercial, education and healthcare facilities. The firm is organized into specialized groups that focus on these sectors, providing clients with project teams that have specific expertise in the standards, regulations and technologies that pertain to their building type and use. Currently, gkworks has over 300 professionals in offices throughout United States and India. The firm is listed on Zweig White's Top 100 Fastest Growing Design Firms and is also ranked by Engineering News Record as one of the nation's Top 100 Construction Management firms. gkworks advocates the strategic and long-term interest of our clients. gkworks collaborative culture, integrated expertise and emphasis on communication is ideally suited in this regard. The firm's process is participatory, with clients, consultants, craftsmen, contractors and developers all contributing throughout the process. We are unified in our commitment to providing first-rate client service. |

We provide services to engineers, inspectors, and construction professionals. Located in the City of Pasadena we are an approved testing facility by the ICC and the City of Los Angeles. Serving Los Angeles County, Orange County, San Bernardino, and Riverside County we are committed to providing our services in a timely and professional manner. We pick up all sample specimens within 24-hours of notification and aim to provide lab results within three days of initial test. |

**ADDENDUM NO.1**

**ENCLOSURE 3**

**BIDDER'S CHECKLIST****(ADDITIONAL SUBMITTAL WITH THE BID)**

1. Submit with bid (or check off included):
  - Guarantee of Auxiliary Loads
  - Guarantee of line piping losses will not exceed allowable for piping between PIE equipment
  - Confirm BOP supplied equipment and piping will not exceed noise requirements
  - Describe Site Staffing Plan and expected craft manpower curve
  - Assure compliance with the Mitigation Summary
  - ***Construction Staging and Traffic Management Plan is a mitigation measure***
    - Describe equipment storage and laydown plan
    - Describe craft parking and trailer plan
    - Describe traffic management, equipment deliveries, etc.
2. Describe steam blow approach – must be silenced/quenched with pressure regulation
3. Describe gas blow approach – must be air blows and silenced
4. Describe commissioning plan
5. Provide an example turnover package used on a previous project that will be used for this project
6. Describe the software and 3D modeling package you will use for the design. How will it be used as a tool in the field. 3D Model to be submitted to PWP along with editable CAD files as part of the project turnover.
7. Allowance for soil remediation and demolition work is included per scope description. Should the amounts vary by the allowance amounts, the City would like to have a unit rate for changes for adds and deducts for the following:
  - Price per yard for disposal of dioxin contaminated soil
  - Price per yard for brick disposal
8. Provide other unit rates for changes.
9. Describe technique to be used for installing the sample panel in the lab while maintaining rear access.
10. Confirm allowance for furniture of \$75,000
11. Confirm construction of cooling tower by BOP
12. Confirm GSU dress-out and fill by BOP
13. Confirm price for OSTG tube orbital welding, performed by IST, is included in the pricing in Item E of the Bidder's Proposal.
14. Provide resumes for archeologist and paleontologist
15. Define the proposed geotechnical engineer that will be used for the pre-excavation meeting and will be on site during for the over excavation, demolition and remediation scope.
16. Clarify if any new additional geotechnical work will need to be done. Assume resistivity will need to be done.

**ADDENDUM NO.1**

**ENCLOSURE 4**

**BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK****GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION**

16. A new ammonia forwarding pump skid to be located by the existing B-3 tank
17. The steam water analyzer / sample panel
18. Cycle chemical feed system
19. Cooling tower chemical feed system
20. 2x100% Demin water pumps
21. 2x100% Demin water forwarding pumps
22. One Demin water storage tank
23. One Fuel gas drains tank for gas compressors
24. One Fuel gas drains tank for final/last chance filter at gas turbine
25. 2x100% Process drains forwarding pumps
26. Equipment drain sump and pumps
27. One Potable water recirculation skid for eyewash stations
28. Two Air receiver tanks to be installed at GT 3 & 4
29. 2 x 100% Waste water transfer pumps
30. One Wastewater storage tank
31. One Sanitary sewer lift station
32. Weather station

In addition to the foregoing equipment, the BOP Contractor will also be supplying:

1. Management
2. All engineering and studies to design the plant and integrate the PIE equipment
3. Procurement of BOP Contractor provided equipment and bulk materials
4. Demolition and preparation of the project site (see Project Items of Note below)
5. Modifying the access to the State Street cul-de-sac and addition of gates
6. New 10'-0" high concrete wall and solid metal gates on the west side along South Fair Oaks Ave
7. Construction of the new control room/admin facility
8. Construction of the new water lab
9. Construction of the natural gas line from the SoCalGas meter station to GT5
10. Construction of 17 kV and 34.5 kV underground conduit and vaults
11. Construction of the GT5 plant
12. Installation of conduit for use by PWP in installing the IT, telecom, and security infrastructure
13. Reroute of the underground 4'x6' storm drain and any necessary bypasses or laterals
14. Operating Procedures for GT5
15. Training for the BOP Contractor supplied equipment
16. Commissioning
17. Project closeout

In addition there is one scope of work that will be bid as an option. Pricing must be supplied for the bidder's proposal to be deemed responsive.

1. Rehabilitation of the Maintenance Building

The BOP Contractor is expected to subcontract for the following services:

1. A paleontologist and archaeologist for pre-excavation kickoff and site monitoring on an as needed basis
2. A qualified CA licensed geotechnical firm must be present for all excavation and backfill activities on site. Due to the in situ condition of the soil, a third party must be present to make a determination that competent soil has been reached during the over-excavation process described

## BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK

## GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION

in the geotech report and this document, and that any existing on-site soil that is used for backfill is suitable for use as structural fill. This geotechnical firm shall be responsible for determining the soil that must be removed from site, whether it is contaminated with organics, lead, or other materials discovered during the excavation process. Allowances for these quantities are provided below to establish an equal basis of bids. Also, this third party geotechnical firm must evaluate through laboratory testing to determine if any imported soil is suitable for use as structural fill. Any imported fill must be provided with documentation of the source that it is certified free from contaminants.

Hydrologue, a local Pasadena geotechnical firm, must be used for has performed all the geotechnical studies included in this scope of work document. The BOP Contract bidders must review this information to determine if the information provided is adequate for use in detail design. The City of Pasadena has provided the following Hydrologue reports for the BOP Contract bidders' information only: Soils Engineering Investigation (Geotech Report with soil borings) the Phase II Environmental report, the Soil Thermal Resistivity report and the Geophysical Investigation Report (Ground Penetrating Radar). If additional soils investigation is required, the BOP Contract bidders should include these studies in their price.

2. A third party related 3rd party geotechnical firm will be required to be on site for all inspections, testing and reporting including compaction, soil testing, etc. The BOP Contract bidders are free to contact Hydrologue for these services, but are in no way obligated to contract with them for these purposes.

3. Other 3<sup>rd</sup> party inspection/testing services, e.g. concrete testing, high strength bolting, etc.
4. Innovative Steam Technologies to perform the OTSG orbital welding
5. Cooling tower supplier for erection of the General Electric supplied cooling tower
6. All other subcontractors necessary for the BOP Contractor to perform its scope of work subject to the 50% self-performance requirement.

The BOP Contractor must be signatory to the Project Labor Agreement (PLA). The PLA does include a requirement that 25% of the certified payroll be local hires (from within the zip codes that are a part of the City of Pasadena).

The entity that designs the Plant Control System, either the BOP Contractor, its engineer, or a subcontractor, shall have the following experience:

1. Combined cycle experience
2. Experience with the GE Mark VIE control system
3. Experience with Once Through Steam Generators

GE Integration would be an acceptable provider.

The BOP Contractor is responsible for the following guarantees:

1. Auxiliary Power
2. Schedule
3. Complying with allowable piping losses as defined by General Electric
4. Near field noise of the equipment and piping supplied by BOP
5. Far field noise of the equipment and piping supplied by BOP

## A.6 Pasadena Water &amp; Power Scope of Work

## BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK

## GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION

BOP Contractor inefficiency will require the BOP Contractor to provide for additional mandays as part of its scope.

- General Manager obtained permit documents such as, the SCAQMD PTC (air permit), CEQA/EIR documents, a Mitigation Summary, the existing SUSMP and SWPPP documents for reference and the Waste Water permit application.
- Existing Pasadena Water and Power Documents. Due to the history associated with the Glenarm site, there is an assortment of drawings with some dating as far back as the 1920's up to the more recent GT 3 & 4 installation in 2004.

- There will be an as-built of the water main backflow preventer relocation coming off of the State Street Cul-de-sac after it is completed. This is being performed to increase the turning radius for trucks coming off of State Street into the project site (this is now shown on the C1-3 drawing).
- There are structural drawings for the existing Pump Building (which will become the Maintenance Shop)
- An existing GT3 & 4 GSU foundation drawing has been included strictly for reference on construction methodology, grating, elevation, etc. Similar construction will be used for the GT-5 GSU and auxiliary transformers.
- The Demolition Scope supporting documents are included in this section (narrative below under Civil)
- Drawings for the existing underground Electrical infrastructure that will be used to convey 34.5kV and 17.2kV cables from the site to the Receiving and Distribution yards located to the north of Glenarm Street. Also included are existing underground electrical duct banks for reference in routing new utilities in the plant.
- The existing underground Mechanical piping systems in the GT 3 & 4 site are also included for reference in routing new utilities in the plant.
- There are some existing survey drawings included for reference; however the BOP Contractor will be required to perform their own pre-installation surveying and conduct surveying as a course of installing the Work. *Please note during the early phases of the project it was discovered that there were some minor discrepancies between the survey and some of the as-built drawings provided to PWP for the GT 3 & 4 project.* The plant has been laid out using the current survey information.
- There is an assortment of other existing underground drawings that the BOP Contractor will need to study to familiarize himself with prior to beginning the Work. Included in this section are unmarked versions of the existing circulating water tunnels (these were modified to illustrate the scope of demolition work in the demolition section. The originals are provided for clarity). Also included are details illustrating the Broadway-Glenarm tunnel, which currently serves to provide an avenue between the two sites beneath the Metro railroad tracks. A new ammonia line and some interconnecting conduits will need to be run between the two sites in this tunnel. No new borings beneath the tracks will be permitted.

- The Geotechnical Reports are also included in this section [for the BOP Contract bidders' information](#). There was more than one report performed for this project and all are relevant to the Work. The BOP Contractor is expected to review the information provided. After the soil remediation work is complete, additional resistivity testing shall be performed by the BOP Contractor [using Hydrologue](#).

**BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK****GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION**

- Geotechnical (if additional [is-studies are](#) required)
  - Surveying
  - Civil
  - Structural
  - Architectural
  - Plumbing
  - HVAC
  - Process and Performance
  - Mechanical
  - Electrical
  - Instrumentation & Control
  - Fire detection and protection
- Studies including, but not limited to, Grounding resistance testing (post soils remediation), Electrical Protection and Coordination, including Ground Fault, Electrical Grounding per IEEE 80, Power System Stabilizer Settings Electrical Protective Relaying Settings shall be provided in Protection Study report.

**C.4.1.3 Procurement services including, but not limited to the following:**

- Procurement of Equipment, Materials and Services to complete the BOP scope of work
- The Request for Proposals (RFP) Packages for all Procurements
- Vendor Negotiation, Purchase Order Development and Expediting Services
- Vendor Submittal Management, Document Distribution and Review Comment Coordination
- Quality Inspections and Factory Test Participation
- Procured Equipment and Material Receiving, Handling and Storage (including General Manager supplied Equipment)
- Startup Spare Parts for equipment supplied by the BOP Contractor)

**C.4.1.4 Technical writing and manual assembly services including, but not limited to the following:**

- Managing Equipment O&M Manuals
- Developing Turnover Packages and Commissioning Procedures
- Developing Performance Testing Procedures
- Assembling Recommended Spare Parts List
- Developing Custom O&M Manuals, with operating procedures suitable for training purposes
- Lubrication and Preventive Maintenance Schedules

**C.4.1.5 Testing services including, but not limited to the following:**

- Preoperational Checks including Instrument Calibration, Loop Checks, Electrical Equipment Testing, Relay Setting, Motor Control Checks, Motor Tests, Coating Tests, Pipe Support Adjustments Control Logic Checks and System Walk-Downs
- System Functional Testing
- Performance Testing
- Emissions Source Testing (CEMS Certification by PIE Contractor)
- Reliability Testing

**BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK****GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION****F. ARCHITECTURAL REQUIREMENTS**

Refer to the Architectural Scope in Section A.2

The intent is for the BOP Contractor to take the document 037-5056 Architectural Scope of Work included in A.2 along with the Site Conditions document, the Architectural drawings and specifications, to facilitate building pricing and erection. With respect to the new Control Building, Water Lab and the Maintenance Shop tenant improvement, the BOP is responsible for complying with the current and applicable sections of the California Green Building Code, Title 24, Part 11 (CAL Green), in addition to City of Pasadena Building Codes which amend and in some cases supersede the CAL Green standards.

**G. CIVIL AND DEMOLITION REQUIREMENTS****G.1 General Requirements**

This section identifies the scope of work to properly design the facilities and to perform the civil construction work for the City of Pasadena GT-5 Glenarm Repowering Project.

Civil engineering work shall be performed under the direction of engineers licensed in the State of California with experience in the requirements for this highly seismic area. The civil engineering work shall further comply with the technical requirements, as identified herein. Copies of calculations and drawings shall be submitted to local building inspectors as required as part of the process for obtaining any required building permits, as well as to the General Manager and Engineer.

The civil work includes the underground demolition activities, over-excavation and recompaction of the substrate per the [gGeotech](#) report, rough grading and compaction, drainage, roads, parking, fences and construction sedimentation control activities to be done throughout the project site, before the majority of the other work commences. It is intended that this rough earthwork be done to provide a suitable work area to allow the installation of the plant facilities. Quantities of soil to be excavated and recompacted, organic materials and lead contaminated soils to be removed from site and concrete volumes to be demolished have been provided as an allowance below. Contractor shall provide unit rates to account for additional material to be handled / removed, or to provide credit for materials not handled or removed. Please note that the soil volume listed as "Organics removed from site" will most likely be reduced. This soil, if cleared of organic material, can be used for fill on site per the [gGeotech](#) report. It is a requirement of this scope of work that ~~the author of the~~ [California licensed](#) geotechnical [engineer](#) report, ~~Hydrologue~~, be on site for a pre-excavation meeting, and on site to witness the earthwork activities. ~~Hydrologue~~ [This geotechnical engineer](#) shall be retained by the BOP Contractor and their costs be incorporated into the proposal pricing. The BOP Contractor will work the General Manager to assure accurate accounting of the materials.

- |                                                                            |                  |
|----------------------------------------------------------------------------|------------------|
| • Concrete demo for tunnels, stack foundation, train tracks, gantry crane: | <b>700 cy</b>    |
| • Concrete demo from old house foundations near new tanks                  | <b>50cy</b>      |
| • Remove brick and asphalt buried near old house foundation                | <b>50cy</b>      |
| • Import Fill to fill the tunnel voids                                     | <b>2500 cy</b>   |
| • Organics removed from site                                               | <b>1300 cy</b>   |
| • Over-excavate and re-compact soils, but not removed from site            | <b>13,000 cy</b> |
| • Lead contaminated soil, removed from site                                | <b>25 cy</b>     |

## BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK

### GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION

An overall site plan, C1-3, has been included in this scope of work to illustrate the location of the new plant in relation to its surroundings, as well as indicate some improvements associated with the plant. The plant will be located south of the historically significant Glenarm Building formerly used by the City for power generation and north of the historically significant Pacific Electric Building, formerly used for maintenance of the street trolleys in Pasadena. These buildings will need to be protected from damage as a course of installing the new plant.

#### G.2 Site Development and Demolition of Existing Site Infrastructure

The Project site has been used for power generation for over 100 years and is clearly a “brownfield” site. The site is essentially flat with some existing features visible from grade. Before work can begin, the existing fencing between the GT-5 site and GT’s 1, 2, 3 & 4 shall be carefully removed and retained. A temporary fence will be installed near GT 1, 2, 3 and 4 to keep craft personnel out of operating areas and provide site security as illustrated on C3-4. Location of the temporary fence shall be coordinated with the General Manager to not hamper day to day access for operations. The existing fencing that is removed will be reused at South State Street.

There are security cameras mounted along the existing fence described above. The BOP Contractor shall coordinate relocating these cameras with the General Manager prior to removing the fence.

The existing site shall have rubbish and debris removed, especially around the Pacific Electric Building. Coordinate with PWP for debris that should be removed.

There are several existing underground structures, mechanical piping, fire lines, electrical conduit, storm drains, and train rails, etc., that will need to either be demolished or relocated as part of the GT-5 project. Please refer to the demolition scope drawings for details. These drawings can be found in A.3, Reference and Preliminary Design Scoping, Existing PWP Drawings, Demolition Scope. The General Manager has performed ground penetrating radar of the site and a report is included in this scope of work identifying many of the existing underground utilities and structures. The Contractor shall clear the existing surfacing, taking care to retain or replace the existing storm water erosion mitigation measures.

Please note that prior to excavation on site, the CEQA permit documents require that both an archeologist and a paleontologist be present on site for a pre-excavation meeting, and that they be contacted in the event an artifact is encountered (this can be one person if they qualified to observe in both capacities). Additionally, part of this scope is to have the soil tested for dioxins while excavation is being performed.

The Geotech. Hydrologer, A California licensed geotechnical engineer will need to be available for testing during excavation. The duct work that runs down the south face of the Glenarm Building will need to be removed down to grade. All supports attached to the building will need to be removed. Areas where concrete or other substrate is exposed as a course of doing this work will be repaired and painted to match the existing surface. The open ends of the duct work on the roof will need to be permanently sealed to keep out the elements and wildlife from entering through the openings. Any areas where the duct removal will leave a void in the handrail shall be replaced in kind to make the roof safe for PWP personnel.

The exhaust stack will need to be removed. The handrail where walkway from the stack to the roof meets shall be replaced in kind to make the roof safe for PWP personnel.

## BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK

## GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION

As part of the project demolition and improvements, the below grade tunnels need to be exposed, the piping removed, concrete structure demolished and all penetrations through the south wall need to be closed off with structural concrete in the same thickness as the existing subgrade wall. Adequate shoring shall be designed, installed and maintained to limit the extent the Glenarm Building basement wall is unsupported, to limit the extent of excavation and to protect employees working in the trench. The openings and pipe penetrations in the wall shall be cleaned of all structurally unsound material utilizing a combination of bush hammering, pressure washing, blasting, etc., reinforcing steel shall be installed by drilling and epoxy grouting into the perimeter of each opening, reinforcing steel installed across the opening, bentonite type waterstop (or other approved material) securely installed, bonding agent applied, the openings formed and concrete placed to produce a water tight and structurally sound bearing surface. Note, the most effective and cost effective way to seal the east tunnels may be to place a new wall on the south side of the Glenarm Basement. Water currently enters into the basement of the Glenarm building through these tunnels, so it is imperative the openings be repaired with structure and water tightness in mind. For UG concrete that is needed for water proofing/sealing of below grade wall openings, Xypex shall be added to the concrete as an admixture. This product crystallizes the using the free water to seal micro cracks and waterproof the surfaces. Any other penetrations discovered upon exposing the basement wall shall also be sealed in a like manner.

Once the concrete has sufficiently cured, the forms shall be stripped, the bond between new and old concrete, as well as any defects in the face of the new concrete, shall be "rubbed out" to blend the seam as best practical inside and out.

**The extent of the tunnel demolition shall be such that no part of an existing tunnel shall be left in place beneath the vertical projection of any a foundation, nor within the zone of influence of any equipment foundations.** Please note that on overlays of the general arrangement on the existing subgrade features, it will indicate new permanent improvements will reside over the existing tunnels. The tunnels in the area beneath the north road, south of the Glenarm Building may be demolished in their entirety or only to a depth of eight feet, with the exposed tunnel cavity backfilled with engineered fill to finished grade in accordance with the [requirements-recommendations](#) of the [gGeotechnical rReport](#). [The geotechnical report has been provided for information only and the basis of bid. As mentioned above, should the BOP Contractor feel additional geotechnical studies be required, they should be included in their bid.](#) Should the Contractor choose to not remove the tunnels in their entirety beneath the north road, the Contractor shall test the condition of the soil beneath the tunnels in accordance with the requirements below. Final determination shall be made by the engineer responsible for sealing the drawings in cooperation with the on-site [gGeotech](#).

The soil beneath the tunnel areas shall be evaluated by the geotechnical engineer to determine if they can be backfilled as is, or if they need to be scarified and recompacted. Backfill material shall then be placed in controlled lifts with compaction tests taken regularly as recommended by the [gGeotech](#) report, or flowable fill used to assure sound bearing. If the base of a tunnel is left intact, it should be penetrated in several areas to allow water to pass through.

The BOP Contractor shall take into consideration the surcharge that construction equipment, permanent equipment foundations and heavy truck loads when performing the backfill adjacent to the Glenarm Building basement wall.

As part of the GT-5 project, some of the existing site surface paving will need to be removed to accommodate the subsurface construction work, and new surfacing will later be installed. Areas removed or inadvertently damaged by the contractor shall be replaced as part of this scope. Also note that there will be several areas where existing paving will need to be removed and replaced, such as for running the gas

**BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK  
GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION**

#### G.4 Soil Conditions

The existing soils on the site consist of 5 ft -10 ft of fill that is unsuitable for support of structures, concrete and heavy vehicular traffic in its current condition. The contractor will be required to remove and stockpile the fill to a depth that can be proof rolled and approved by [PWP's-the BOP Contractor's](#) geotechnical engineer. The fill is expected to be suitable for replacement and re-compaction under the supervision of a geotechnical engineer. Soils under the proposed areas to be paved may be removed to a minimum depth of 2 feet below finished grade and re-compacted to sub base elevation.

Contractor shall review the [Draft](#) Soils Engineering Investigation (August 1, 2011) to determine the site compaction and grading requirements. If necessary, the BOP Contractor shall obtain additional geotechnical data at [BOP Contractor's](#) expense. Contractor shall be responsible for improving the pre-existing soil conditions of the Site, to the extent presented in the Allowances.

**BOP ENGINEER, PROCUREMENT, AND CONSTRUCTION SCOPE OF WORK****GLENARM REPOWERING PROJECT, GT-5 COMBINED CYCLE INSTALLATION**

The subsurface exploration was performed to evaluate the soil and groundwater conditions at the proposed site and to determine the type and depth of foundation systems suitable for the proposed power plant and auxiliary systems. The information obtained and analyses of conditions are the basis of the foundation design. However, if considered necessary, the Contractor shall conduct additional exploration at Contractor's sole expense for the purposes of their final design and construction. The soils are described as moderately corrosive and cathodic protection will need to be provided accordingly. Soil resistivity testing shall be performed after over excavation and recompaction.

Should structural backfill materials need to be imported; a source must be identified and supplied by the Contractor. Prior to use, the BOP Contractor shall submit a complete analysis of any needed material to the General Manager, prior to using the proposed material. This is for review purpose only. All materials shall be the sole responsibility of the Contractor. All materials imported or placed shall be identifiable by place of origin and the soils analysis described above. For this purpose, Contractor shall maintain a log with trucking tickets or bills of lading which indicate where the soil was imported from, the approximate areas placed and the quantities placed. Imported soil shall be subject to random inspection and Contractor shall comply with PWP personnel in its performance of these inspections. If hazardous, deleterious, unsuitable material, or material for which the Contractor has no records of origin and analysis, has been placed, it shall be removed and replaced with materials for which origin and analysis has been provided, at the Contractor's expense. Flowable Fill may be used for backfill areas as accepted by the General Manager. Contractor shall document areas, type and approximate quantities where flowable fill has been used on the as-built drawings.

**G.5 Topographic and Site Survey**

A preliminary topographic and site survey was performed and was utilized for preliminary design work as well as air permit modeling. The existing topo is shown on C3-1 as well as proposed finish grade. A final site survey shall be completed by the BOP Contractor for final design to accurately represent the existing surface conditions and to layout proposed buildings and equipment. Final top of concrete shall be per the Design Criteria document. All exposed concrete areas, including equipment foundations, shall be designed to drain and not puddle.

The BOP contractor shall establish at least three permanent concrete and brass hub survey monuments on site for use in control of the project construction. These monuments will need to be protected to prevent their disturbance by vehicular and construction equipment traffic. These monuments will be left in place after the contractor has demobilized for future site control use and turned over as part of the as-built drawing information. The existing survey was performed off of control points indicated on C1-3.

The BOP Contractor will be responsible for all surveying to locate existing features, for interconnect points, to assist with plant layout and for control during construction and equipment assembly.

**G.6 Site Preparation**

Graded areas shall be smooth, compacted, free from irregular surface changes, and sloped to drain. Slopes for embankments will be no steeper than 3:1 (horizontal: vertical) unless otherwise determined by the [BOP Contractor's geotechnical engineer](#). Areas to be backfilled will be prepared by removing unsuitable materials and rocks. The bottom of an excavation will be examined for loose or soft areas. Such areas will be fully backfilled with compacted fill.

In [gGeneral](#), Backfilling shall be performed in accordance with the Geotechnical Soils Investigation Report, in Section A.3.C of these Specifications. Backfilling shall be done in layers of uniform, specified

**ADDENDUM NO.1**

**ENCLOSURE 5**

**Design Criteria**  
**Pasadena Glenarm Repowering Project (GT-5 Combined Cycle Installation)**

| Item | Criteria                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Revision | Comments                                                                               |

| 8.5  | Land Use                 | The project vicinity includes a mix of land uses with commercial and single-family residential uses to the west across Fair Oaks Avenue; multi-family residential uses to the south; Blair High School, Allendale Elementary School, Pasadena Public Library (Allendale Branch), and Allendale Park to the east of the Broadway site across the Pasadena Freeway; and, PWP's dispatch and distribution station and other commercial uses to the north across Glenarm Street.                                | A        |                                                                                                                                                                                                                                                                                                                       |
| 8.6  | Setbacks                 | None Required by City Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | A        |                                                                                                                                                                                                                                                                                                                       |
| 8.7  | Flood Plain              | TBD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | A        |                                                                                                                                                                                                                                                                                                                       |
| 8.8  | Elevation                | 751 FT Above Mean Sea Level (AMSL). Finish floor elevations and equipment foundations shall be nominally four inches above finish grade. This will vary depending on requirements such as the PDC, Steam Turbine, GSU, etc... 100 year rain events must also be taken into consideration for final concrete elevations.                                                                                                                                                                                     | B        | Refer to C3-1 for final grades.                                                                                                                                                                                                                                                                                       |
| 8.9  | Existing Grade           | Predominately Flat. Existing topo shown on the C3-1 grading plan.                                                                                                                                                                                                                                                                                                                                                                                                                                           | C        | Note that grades at GT 3 & 4 were not well thought out and result in drastic grade changes around some of the equipment. The BOP Contractor shall ensure that this is not repeated at GT-5.                                                                                                                           |
| 8.10 | Climate                  | Hot, Dry and Dusty with Low Precipitation                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | A        |                                                                                                                                                                                                                                                                                                                       |
| 8.11 | Soil                     | The site consists of manmade fill to a depth of approximately 5 to 7 feet below grade consisting of brown fine to coarse clayey silty sand and fine to coarse micaceous silty sand in a moist and moderately loose to moderately compact condition. Beneath the man made fill, mottled brown/gray/black silty clayey sand in moist and moderately loose condition extending to approximately 10 feet below grade. Site will need to be overexcavated and recompacted in accordance with the Geotech report. | GD       | A representative from Hydrologues a qualified CA licensed geotechnical engineering firm must be on site during the overexcavation activities. Also, BOP contractor shall be responsible for having an archeologist and paleontologist on site for pre-excavation meeting and as necessary upon discovering artifacts. |
| 8.12 | Soil Percolation         | TBD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | A        |                                                                                                                                                                                                                                                                                                                       |
| 8.13 | Soil Resistivity         | Refer to Geotech reports                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | B        |                                                                                                                                                                                                                                                                                                                       |
| 8.14 | Groundwater              | Ground water was not encountered in boreholes advanced to 50 feet below grade from past geotechnical investigations.                                                                                                                                                                                                                                                                                                                                                                                        | A        |                                                                                                                                                                                                                                                                                                                       |

| 24.16       | Spare Parts                     | Supplier shall provide a priced spare parts list for both startup and 2-year operation at delivery, with pricing valid for 90-days.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | A         |                                                                                                                                                                                                                                                                                                                                                                         |
| 24.17       | External Finish Coat Color      | Final coating color as approved by Owner                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | A         |                                                                                                                                                                                                                                                                                                                                                                         |
| <b>25.0</b> | <b>Civil Criteria</b>           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |           |                                                                                                                                                                                                                                                                                                                                                                         |
| 25.1        | Soil Compaction                 | Soil compaction shall be per the geotech report. All soils work will be performed under the supervision of a third party testing firms. <u>Hydrogeologic A licensed California geotechnical engineer</u> shall be used for the overexcavation and backfill operations. Surcharge on the Glenarm Building basement wall shall be considered as part of the BOP Contractor's design responsibility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>GD</b> |                                                                                                                                                                                                                                                                                                                                                                         |
| 25.2        | Grading and Drainage            | Grading and drainage shall be designed to incorporate all relevant local, regional and state requirements. The design shall minimize earthwork, provide for the collection and infiltration of on-site storm water, provide positive drainage from buildings and structures, provide adequate soil coverage above underground utilities, and support gravity drainage with low runoff velocities whenever possible. Ground level foundation TOC shall be minimum 6" above final grade, or as required to prevent flooding.<br>Note: Grading and drainage design should be complete prior to issuing any underground drawings for construction. This will assure adequate coverage and projection of subsurface utilities above finish grade. All pipe flanges shall be designed to project 1'-0" above finish paving elevation to allow stud removal. Grading shall not have abrupt sloping surfaces (reference GT-3 & 4) | C         | As part of the BOP Contractor's scope of work, the existing storm water piping will need to be relocated to allow space for the new plant equipment. The existing storm drain is rectangular reinforced concrete culvert with an ID of 6'-0" x 4'-0", OD of 8'-0" x 6'-0". Existing drop inlets for GT 3 & 4 shall be protected and retained or relocated if necessary. |
