AMERICAN
BUILDINGS

A NUCOR COMPANY

When you are operating a restaurant, the image, atmosphere and kitchen working efficiency of your establishment can be nearly as critical to your success as the quality of your food. You need a quality facility—and in the realities of today's business, you need it at an economical cost.

The answer is a metal building system by American Buildings Company (ABC).

ONBUILDING

Restaurants

ABC's buildings maximize flexibility of design, starting with the industry's most advanced computer design technology. Every building is treated as one-of-a-kind special, with complete design freedom. ABC's systems can be combined with traditional components such as masonry, brick, stone or glass for just the look you want.

Because American Buildings Company's systems are non-load-bearing, columns can be minimized or eliminated and clear span working areas or other spaces readily incorporated.

These systems are available in 2 color finishes, Silicone-Polyester Cool™ panels or SmartKote® PVDF panels.

Both feature finishes that resist fading, extend the life of the structure and lower your customers' energy costs. SP-COOL™ panels feature a 25-finish warranty and are available in 4 great colors. SmartKote® panels are available in a wide range of colors and can be warranted for an optional 35 years. ABC's metal standing seam roofs are offered with 20-year weathertightness replacement warranties that include both labor and materials.

In addition to their attractive, long-lasting good looks and minimum maintenance requirements, ABC's buildings offer superior thermal efficiency. They typically reduce annual heating and cooling costs by 20 percent to one-third—slashing the main component of building operating costs.

We are represented throughout North America by a network of high-quality local Authorized Builders/Roofers, who can take single-source responsibility for the success of their ABC building projects.
